

### Mission Statement

Our mission is to provide our clients with the highest quality value-added products and services through the efficient use of cutting-edge technology.

### History

Digital Technology Inc. Ltd. is a young cutting-edge Information Technology company, well known in the Internet community for excellence in Web site development and management. Incorporated in February 1996, Digital Technology Inc. Ltd. offered its customers small scale stand-alone PC-based applications and computer systems. In October 1996 we embarked on our first full featured internet web site for Jamaica Money Market Brokers Limited ([www.jmmb.com](http://www.jmmb.com)) which generated a large interest in our production as a local Jamaican company. Due to a growing list of other software development projects no further internet web site development took place until February 1997.

Today DTInc. develops Internet web sites, web-based applications for the Internet and Intranets, provides consulting and training services and provides hosting solutions to a large clientel across many industries and sectors. The company has grown from a one-man, home-office to a seven-man team of professional developers.

### Our Commitment

As with our software development and consulting we provide clients with more than just a web site, we provide you with a complete value-added solution. We stay abreast with the latest technologies and advise our clients as to the most value-added and cost-effective means of implementing solutions to their needs. All our products and services are driven by the client satisfaction. We maintain constant contact with our clients throughout the engagement to ensure that you get exactly what you are looking for and in the event that you are unsure we present you with options from which you can choose the best solution for your needs. As part of our philosophy we believe that the client should play an active part in the design of any production as ultimately the product will reflect your business. Its our duty to get to know your business so we can best address your concerns as far as presenting that business to the world through the window of a browser. We distinguish ourselves from other designers in that we treat every site as if it was our own and we constantly re-visit, refine and update so that we always remain competitive. From a simple text statement to the overall layout we put 100% in every design and construction. We will fully maintain your site and offer 24-hour support 7 days a week.

### Directors

Maurice Barnes, MSc. (Dist) IT, BSc. (Hons) Comp. Sc.  
*Chairman and Chief Technical Director*

Over ten (10) years experience in systems analysis (requirements definition and conceptual design), data communications, hardware and software evaluation, analysis and design of Local Area Networks, Web Site design and programming, Internet connectivity, systems implementation, administration, training and user support.
